## **NEW SOUND PROOFING SYSTEM FOR BOMBARDIER CHALLENGER 300 NOW AVAILABLE**

*Tailor-made exclusively for early serial number Bombardier Challenger 300s, the Silentium Air 300 Series Kit significantly reduces cabin noise levels*

**MONTREAL, CANADA, May 1st, 2010** – Silentium Air, developers of advanced sound proofing systems for business aircraft, today announced the market introduction of the Silentium Air 300 Series Kit, a tailor-made sound proofing system uniquely developed based on the engineering specifications of the Bombardier Challenger 300.

Installation of the Silentium Air 300 Series Kit will generally reduce overall cabin noise levels by approximately three decibels, which represents about an average 30% reduction in perceived noise throughout the cabin. In turn, lower noise levels reduce passenger fatigue and create a much more productive and comfortable environment for conversation, concentration and audio/video entertainment.

Unlike existing noise reduction systems which are generic to aircraft models, the Silentium Air 300 Series Kit consists of pre-fitted modules that are quick and easy to install. Made of the latest aerospace-grade fiberglass and foam, installation of the Silentium Air 300 Series Kit completely replaces factory-installed sound proofing without representing a significant weight increase. Additionally, the Silentium Air 300 Series Kit is FAA supplemental type certificate (STC) approved and thus pre-certified for installation.

Work has started on the first customer Silentium Air 300 Series Kit installation at Bombardier's Business Aircraft Service Center in Tucson, Ariz. This aircraft was first delivered in 2003 and has more than 5,000 flight hours over about 3,000 cycles. Installation of Silentium Air 300 Series Kit was integrated into scheduled overhaul work and did not otherwise require any modifications to the interior of the cabin, which was fully refurbished last year.

“We are proud to be offering the Silentium Air 300 Series Kit at EBACE,” said Nicholas Houseman, President, Silentium Air. “This sound proofing system is unique because it is pre-fitted for the Challenger 300. Thus, installation minimizes costly aircraft maintenance downtime. Going forward, we will introduce similar tailor-made sound proofing systems for the Bombardier Global Express and Challenger 600/601/604 series. Delivery of these systems will be well aligned with upcoming major inspection milestones for these models,” Mr. Houseman concluded.

Visit Silentium Air at EBACE 2010, May 4 - 6 at Palexpo, Geneva, Switzerland, Booth #688.

### **About Silentium Air**

Silentium Air, a Zenith Jet company, has developed a full line of advanced sound proofing systems for business aircraft that significantly reduce cabin noise levels. In turn, lower noise levels enhance an aircraft by reducing passenger fatigue and creating a more productive environment for conversation, concentration and entertainment. Headquartered in Montreal, Canada and founded in 2008, Silentium Air has sold sound proofing systems for a wide variety of aircraft models to customers worldwide.
